Lumière Light Thérapie

EDUCATIONAL SUPPORT OFFERED

On-site installation and training (product training, sales, and marketing) and on-going education and support.

The Lumière Light Thérapie System is the brainchild of Raymond Anthony International (RAI), headquartered in Carlsbad, CA, and headed up by president and COO Tony Case and CEO Ray Mead. RAI is a respected pioneering skincare company dedicated to delivering breakthrough technology and product performance to the professional beauty industry. Committed to both scientific and market research, RAI develops premium skincare products that are relevant, recognized, and in demand within the industry.

The Lumière Light Thérapie device was developed by the world's leading medical device manufacturer in the field of Light Emitting Diode (LED)–Photo Absorption Therapy. The company, Photo Therapeutics offers years of clinical experience, significant intellectual property, and a portfolio of patents. The futuristic Lumière Light Thérapie was developed from the Paterson lamp, a machine first developed by Dr. Colin Whitehurst at the Paterson Institute for Cancer Research in England to treat skincare patients at that country's premiere cancer clinic. During the initial clinical research work, it was observed that the red light emitted by the Paterson lamp had a rejuvenating effect on the skin surrounding the treatment area. This observation led to further trials and the development of the next generation cosmetic light source for the spa and salon.
